OBJECTIVE

Full Stack Developer with 6 months of hands-on experience designing and shipping scalable MERN stack web applications end to end. Delivered 20+ APIs, cut server response time by 35%, and boosted query speed by 30% on live systems. Seeking a full-time software engineering role to build high-impact products.

EDUCATION

B.Tech – Electronics and Communication Engineering

2021 – 2024

Karunya Institute of Technology and Sciences, Coimbatore

SKILLS

Languages: JavaScript (ES6+), Python, C++

Frontend: React.js, Redux, HTML5, CSS3, Tailwind CSS, Responsive UI

Backend: Node.js, Express.js, REST API, JWT Auth, Socket.io

Databases: MongoDB, Mongoose, MySQL, Aggregation, NoSQL Schema

Security: RBAC, Input Validation, Rate Limiting, Penetration Testing

AI & APIs: OpenAI API, Claude API, Third Party Integration

DevTools: Git, GitHub, Postman, VS Code, Multer

Deployment: Render, Vercel, Netlify, CI/CD, Cloud Hosting

Soft Skills: Agile Teamwork, Code Review, Problem Solving, Communication

EXPERIENCE

Full Stack Developer Intern | StackUp Learning Hub, Remote

Nov 2024 – Apr 2025

- Built 20+ RESTful APIs with JWT authentication and RBAC, enabling core features for 100+ active users company-wide.
- Reduced API response time by 35% through MongoDB index tuning and Express.js pipeline refactoring, resulting in noticeably faster page loads.
- Wired Socket.io for event-driven messaging, lowering perceived latency by 60% and powering instant notifications across all live connections.
- Collaborated across 6 Agile sprints, hitting every deadline and running code review cycles that cut the bug reopen rate over 3 major builds.
- Shipped 5 complete features spanning schema design, API layer, React.js UI, access hardening, and zero-downtime release to the cloud.

Full Stack Developer Intern | Keycoders, Remote

Mar 2026 – Jun 2026

- Independently built and delivered 2 production-grade full-stack websites – **TrainersForYou** and **Vtraco** – both currently live and actively serving real users.
- Developed TrainersForYou end to end: a platform connecting users with professional trainers, covering React.js UI, Node.js APIs, MongoDB schema design, and cloud deployment.
- **New Update:** Designed and implemented a new Trainer Booking section in TrainersForYou, enabling trainers to manage availability, accept bookings, and track scheduled sessions in real time.
- Built booking APIs with Node.js and Express.js, integrating MongoDB to store and manage booking records, trainer schedules, and user appointment data.
- Built Vtraco from scratch as a complete MERN stack product, implementing user flows, backend services, and responsive frontend modules.
- Actively handling post-launch maintenance for both live websites – updating backend logic, fixing bugs, and pushing feature improvements to production.
- Managing MongoDB database updates, API enhancements, and ensuring uptime and stability across both deployed platforms.

PROJECTS

V Traco – Attendance & Payroll Management System | *vtraco.com* *React.js, Node.js, Express.js, MongoDB, JWT, Multer*

- Built a full-stack web-based attendance and payroll management system handling employees, contractual staff, external vendors, and project-based work under one platform.
- Designed and implemented 5 role-based user types – Admin, Employee, Contractual Employee, External Vendor, and Super Admin – each with dedicated workspaces and access control.
- Developed a Project Allocation module enabling admins to assign projects to employees with date ranges and incentives; employees see only their active assigned projects for manual punch.
- Built a Manual Punch module allowing employees to submit punch-in with photo and location, and punch-out with session details; attendance remains Pending until admin verification.
- Implemented a Bulk Attendance Import module supporting XLSX, XLS, CSV, and TXT biometric files; admin-verified statuses are preserved and never overwritten by bulk imports.
- Engineered a Salary Calculation engine computing payable days from verified present, absent, half-day, leave, and week-off statuses linked directly to project attendance.
- Built an Incentive and Reimbursement module tracking project-based incentives and allowing employees to submit reimbursement requests with attachments for admin review and payment.

Resume Intelligence Platform – ATS Tool *React.js, Node.js, MongoDB, JWT, OpenAI API*

- Launched an ATS scoring engine evaluating keyword alignment, achievement depth, and completeness across 200+ uploaded resumes.
- Secured 15+ endpoints with JWT guards, input sanitization, and throttling, blocking all intrusion attempts flagged in audits.
- Integrated OpenAI API to auto-generate tailored, section-wise improvement notes, trimming average revision effort by 40%.
- Optimized queries with compound indexes and aggregation pipelines, sustaining sub-200ms throughput under a 50-user load test.

Full Stack Content Management System *Node.js, MongoDB, JWT, Multer, Vercel, Render*

- Engineered a CMS with 3-tier RBAC (Admin, Editor, Viewer), protecting 10+ routes via token-based middleware and audit logging.
- Crafted a responsive dashboard with full CRUD, rich editing, and Multer file uploads, slashing publishing turnaround by 50%.
- Boosted read speed by 30% via field-level indexing and lean projection fetches, confirmed by Atlas Performance Advisor.
- Deployed across a dual-cloud CI/CD setup, achieving 99.9% uptime and seamless rollout over 10+ consecutive production pushes.

TrainersForYou | *trainersforyou.com* *React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSS*

- Built a full-stack platform connecting users with professional trainers through a responsive and user-friendly interface.
- Designed and developed a Trainer Booking section enabling trainers to set availability, accept bookings, and manage scheduled sessions in real time.
- Built secure REST APIs for booking workflows, trainer profiles, and session management using Node.js, Express.js, and MongoDB.
- Implemented JWT-based authentication and authorization for both users and trainers with role-based access control.
- Deployed to cloud hosting for public access; currently live and actively maintained with regular backend updates.

CERTIFICATIONS

- MERN Stack Developer – Professional Certification Program (2024)
- JavaScript Algorithms and Data Structures – freeCodeCamp (2024)
- Cloud Computing – NPTEL (Jan – Mar 2023)
- Industry 4.0 and Industrial Internet of Things – NPTEL (Jan – Mar 2021)
