OBJECTIVE

Full Stack Developer with 6 months of hands-on experience designing and shipping scalable MERN stack web applications. Delivered 20+ APIs, reduced server response time by 35%, and improved query performance by 30%. Seeking a full-time software engineering role to build high-impact products.

EDUCATION

B.Tech – Electronics and Communication Engineering

2020 – 2024

Karunya Institute of Technology and Sciences, Coimbatore

SKILLS

Languages: JavaScript (ES6+), Python, C++

Frontend: React.js, Redux, HTML5, CSS3, Tailwind CSS, Responsive UI

Backend: Node.js, Express.js, REST API, JWT Auth, Socket.io

Databases: MongoDB, Mongoose, MySQL, Aggregation, NoSQL Schema

Security: RBAC, Input Validation, Rate Limiting, Penetration Testing

AI & APIs: OpenAI API, Claude API, Third-Party Integration

Dev Tools: Git, GitHub, Postman, VS Code, Multer

Deployment: Render, Vercel, Netlify, CI/CD, Cloud Hosting

Soft Skills: Agile Teamwork, Code Review, Problem Solving, Communication

EXPERIENCE

Full Stack Developer Intern | StackUp Learning Hub, Remote

Nov 2024 – Apr 2025

- Developed 20+ RESTful APIs with JWT authentication and RBAC, enabling core features for 100+ active users company-wide.
- Reduced API response time by 35% through MongoDB index tuning and Express.js pipeline refactoring, resulting in noticeably faster page loads.
- Integrated Socket.io for event-driven messaging, lowering perceived latency by 60% and powering instant notifications across all live connections.
- Collaborated across 6 Agile sprints, meeting every deadline and conducting code review cycles that cut the bug reopen rate over 3 major releases.
- Delivered 5 complete features spanning schema design, API layer, React.js UI, access hardening, and zero-downtime cloud deployment.

Full Stack Developer Intern | Keycoders, Remote

Mar 2020 – Jun 2020

- Designed and shipped 2 production-grade full-stack platforms – **TrainersForYou** and **Vtraco** – both currently live and serving real users.
- Engineered TrainersForYou from concept to deployment: a trainer discovery platform with React.js UI, Node.js REST APIs, and MongoDB schema design.
- Developed a new Trainer Booking section, enabling trainers to manage availability, accept appointments, and track scheduled sessions in real time.
- Constructed Vtraco as a complete MERN stack product, covering user flows, backend services, and a responsive frontend interface.
- Overseeing post-launch maintenance for both platforms – resolving bugs, rolling out feature enhancements, and managing backend and database updates in production.

PROJECTS

V Traco – Attendance & Payroll Management System | *vtraco.com* *React.js, Node.js, Express.js, MongoDB, JWT, Multer*

- Architected a full-stack attendance and payroll platform supporting regular employees, contractual staff, external vendors, and project-based workflows under one system.
- Implemented 5 role-based user types – Admin, Employee, Contractual Employee, External Vendor, and Super Admin – each with dedicated workspaces and access control.
- Created a Project Allocation module allowing admins to assign projects with date ranges and incentives; employees view only their active project assignments for manual punch.
- Developed a Manual Punch module where employees submit punch-in with photo and location, and punch-out with session details; attendance stays Pending until admin verification.
- Engineered a Bulk Attendance Import feature supporting XLSX, XLS, CSV, and TXT biometric files, ensuring admin-verified statuses are never overwritten during imports.
- Designed a Salary Calculation engine deriving payable days from verified attendance statuses – present, half-day, leave, and week-off – linked directly to project records.
- Integrated an Incentive and Reimbursement module enabling employees to submit claims with attachments and admins to review, approve, and track all payments.

Resume Intelligence Platform – ATS Tool *React.js, Node.js, MongoDB, JWT, OpenAI API*

- Launched an ATS scoring engine evaluating keyword alignment, achievement depth, and completeness across 200+ uploaded resumes.
- Secured 15+ endpoints with JWT guards, input sanitization, and rate throttling, blocking all intrusion attempts flagged during audits.
- Integrated OpenAI API to auto-generate tailored, section-wise improvement suggestions, trimming average revision effort by 40%.
- Optimized queries with compound indexes and aggregation pipelines, sustaining sub-200ms throughput under a 50-user load test.

Full Stack Content Management System *Node.js, MongoDB, JWT, Multer, Vercel, Render*

- Engineered a CMS with 3-tier RBAC (Admin, Editor, Viewer), protecting 10+ routes via token-based middleware and audit logging.
- Crafted a responsive dashboard with full CRUD operations, rich text editing, and Multer file uploads, reducing publishing turnaround by 50%.
- Improved read speed by 30% through field-level indexing and lean projection fetches, confirmed by Atlas Performance Advisor.
- Deployed via a dual-cloud CI/CD pipeline, achieving 99.9% uptime across 10+ consecutive production releases.

TrainersForYou | *trainersforyou.com* *React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSS*

- Developed a full-stack platform connecting users with professional trainers through an intuitive and responsive interface.
- Designed a Trainer Booking section enabling trainers to set availability, accept appointments, and manage sessions in real time.
- Created secure REST APIs for booking workflows, trainer profiles, and session management using Node.js, Express.js, and MongoDB.
- Implemented JWT-based authentication and role-based authorization for both users and trainers across all protected routes.
- Deployed to cloud hosting for public access; currently live and actively maintained with ongoing backend enhancements.

CERTIFICATIONS

- MERN Stack Developer – Professional Certification Program (2024)
- JavaScript Algorithms and Data Structures – freeCodeCamp (2024)
- Cloud Computing – NPTEL (Jan – Mar 2023)
- Industry 4.0 and Industrial Internet of Things – NPTEL (Jan – Mar 2021)
